

Last trimester I felt lost every time. So, I took a step back and dedicated myself to thinking about what my interests were and what things I would like to create. As a puppeteer and sculpturer, I am very interested in creating interactive toys for children, from the transformation of recycled materials and the elaboration of biomaterials. Previously, I have done work that has to do with the reuse of discarded materials as new materials (biomaterials, in this case). So, why not continue with my practice and improve my artistic project that involves the design and creation of these toys?

Last trimester I ended doing an intervention w/ Anna, exploring how to do toys with technology and biomaterials for kids. We focused more on the educational part of showing how to do biomaterials that could be used as toys.

Some artists that inspire me & look forward to creating as they.

Cas Holman:

<https://casholman.com>

American toy designer. She is known for designing toys that emphasize creativity through unstructured play.

Arvind Gupta:

<http://www.arvindguptatoys.com>

Indian toy inventor & expert in science.

Deborah Hunt

<https://www.instagram.com/maskhunt/?hl=en>

Mask maker, puppeteer & performance artist w/ years' experience.
